Design processes used

Research

Research conclusion

Brainstorming

Prototyping

Research

- collects information on how the app should work
- gather visual ideas that have a similar feature of the project
- researching helps me to decide which font, color, and design style will I be using

Research conclusion

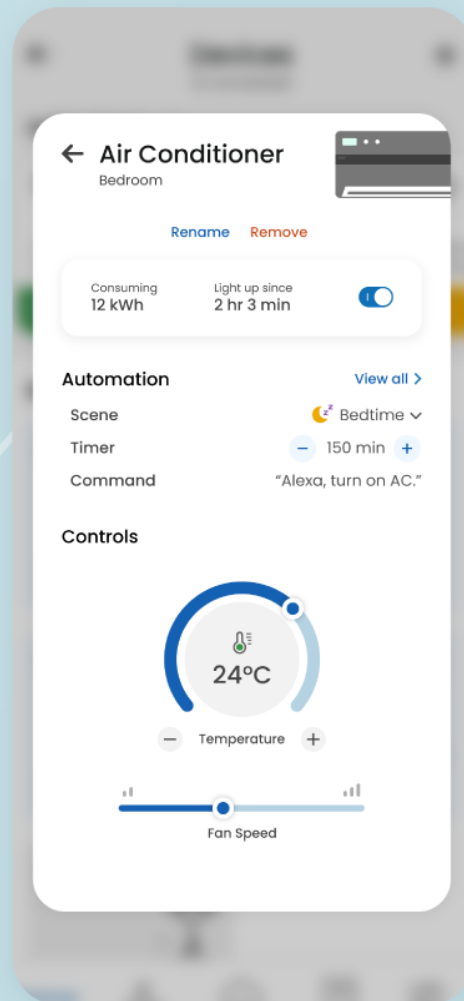

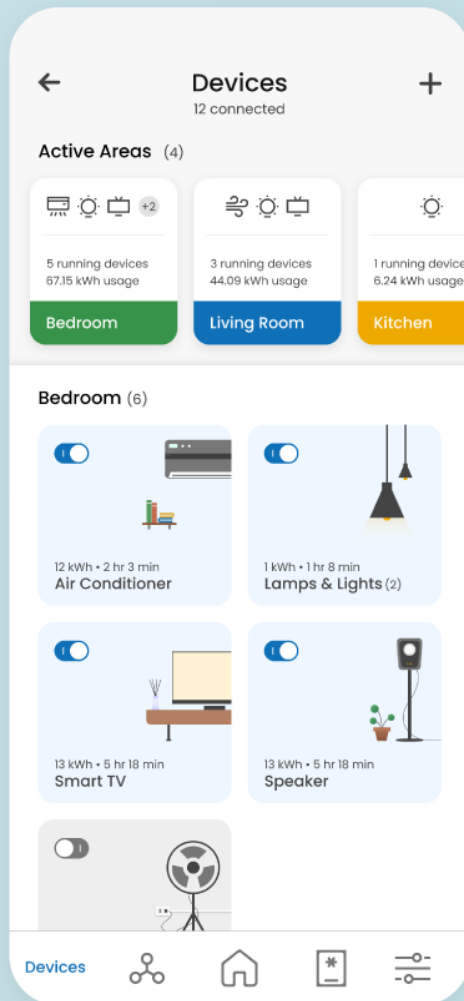

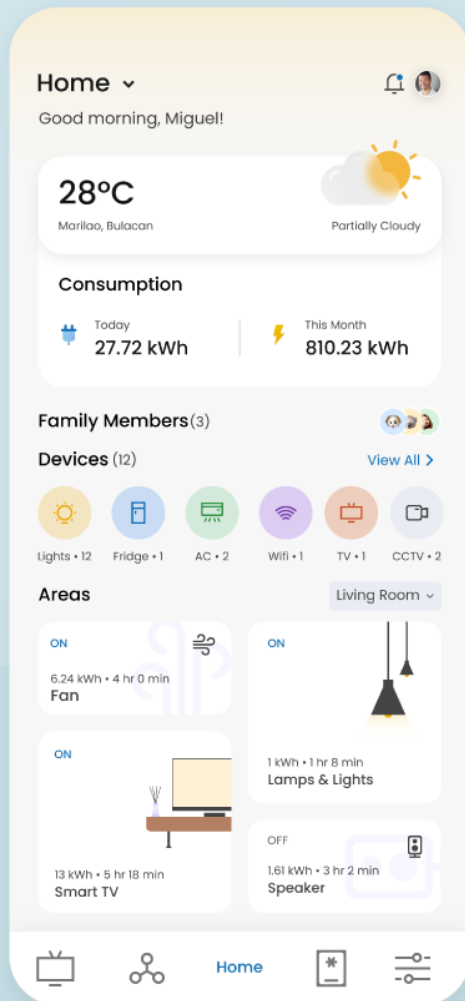

- finalize what design approach should I be using from color, font, icon style
- taking notes of the critical information like if the app needs to be mobile responsive and if the target user is older people, etc

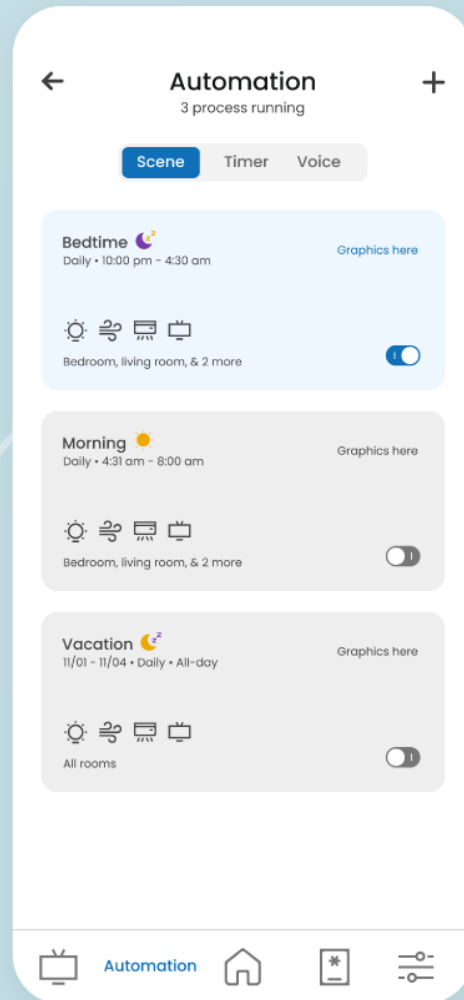

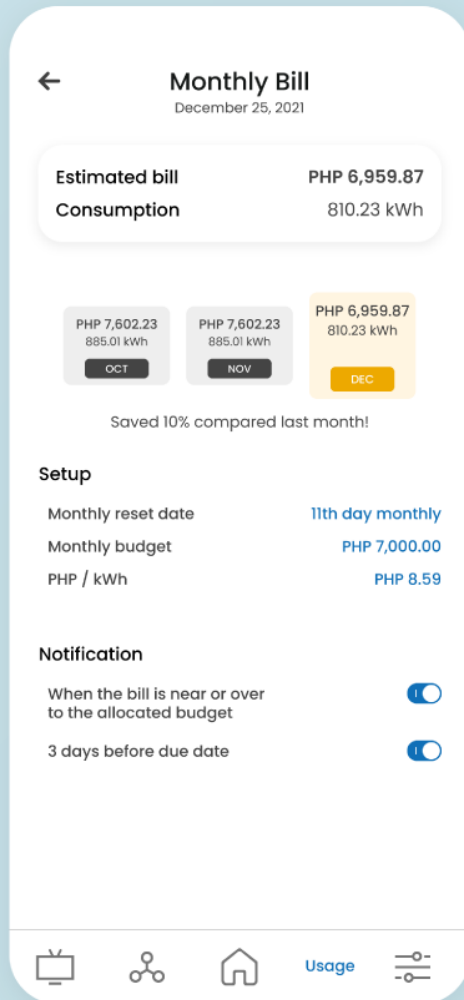

Brainstorming

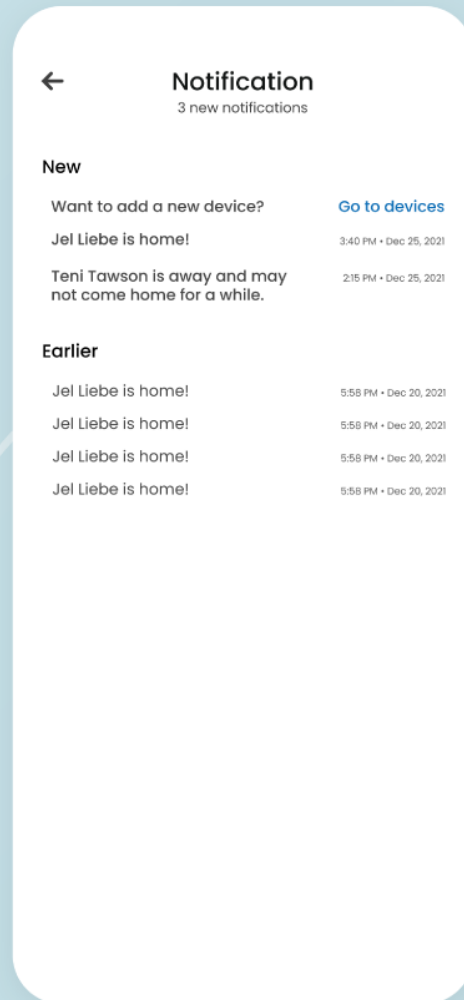

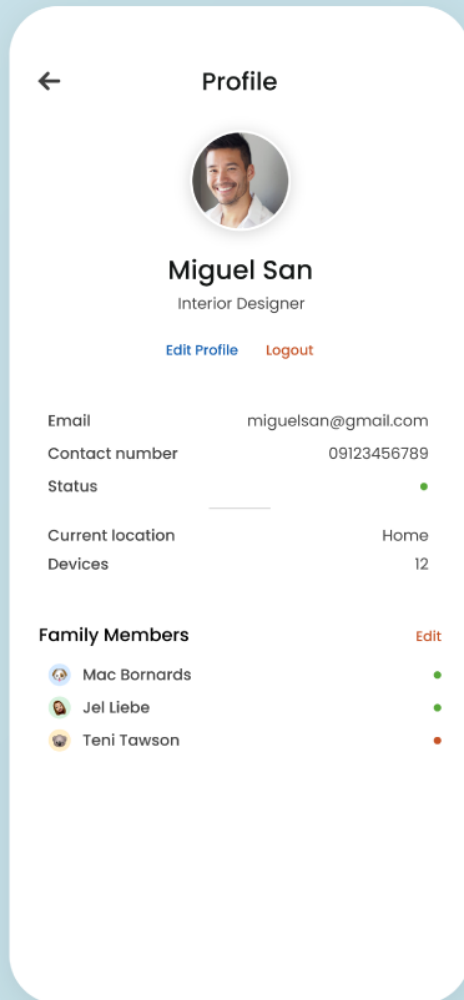

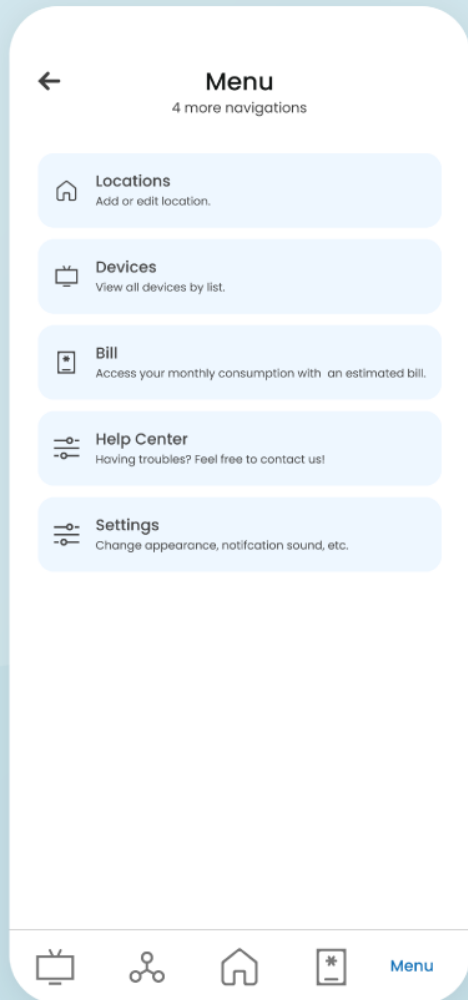

- sketch a prototype of the design, usually hand-made sketches to visualize the concept with simple terms
- create screen workflow
- element style is not finalized here since it can be changed in the actual prototyping step like shadow, box-style, margin, spacing, button, etc

Prototyping

- create the actual visual design for the project
